## Reach 100

## Age 7 to 14

Here is a grid of four "boxes":

You must choose four different digits from 1-9 and put one in each box. For example:

| 5 | 2 |
| :---: | :---: |
| 1 | 9 |

This gives four two-digit numbers:
52 (reading along the 1 st row)
19 (reading along the 2 nd row)
51 (reading down the left hand column)
29 (reading down the right hand column)

In this case their sum is 151 .

Try a few examples of your own.
Is there a quick way to tell if the total is going to be even or odd?
Your challenge is to find four different digits that give four two-digit numbers which add to a total of 100 .

How many ways can you find of doing it?
