

Design an Eco Garden

Gardening is a great way to get outdoors, to grow food to cook and eat and to learn about the natural world around us! We can also use our outdoor space to create a habitats for mini-beasts and other garden visitors and grow flowers to attract nature's little helpers, such as bees and butterflies.

For your DT task this week, can you have a go at designing an Eco Garden for our school?

Key Questions

- Where could we create the garden?
- What you would like the garden to look like?
- Which plants should we grow and why?
- How will we create habitats for mini-beasts?
- How will we attract pollinators (bees and butterflies) to the garden?
- How will we make sure our garden is ECO friendly? e.g. reducing/reusing/recycling, compost bins, water butts.
